PROJECT

Problem Statement - 01: - Create a “List-Report” table showing each country as a rows and genres as columns, with counts of titles.

Solution:

Step 1: - Open Google Chrome, click in the search bar, type “IBM Cognos Analytics”, and press Enter.

Step 2: - From the results, click the first link that comes from the official IBM site (look for ibm.com and the title “IBM Cognos Analytics”).

GROUP NUMBER: 1

Step 3: - When the IBM Cognos Analytics page opens, locate and click [Sign in](#) icon at the top right.

Step 4: - Choose to sign in with your 'IBMid' (select the IBMid / email option). Enter your "IBMid email and password", then click [Continue](#) icon.

Step 5: - After signing in, you will land on the IBM Cloud console or the Cognos product page. Find the service named “**Cognos Analytics on Cloud Trial for Students**” and click **Launch** icon.

Step 6: - After clicking the Launch button, the IBM Cognos official website opens. The display shows the first page of IBM Cognos Analytics, as shown below.

Step 7: - Click on the three lines  (Open menu) icon at the top left corner in IBM Cognos homepage.

Step 8: - After the “Open menu” opens, click  **New** icon.

Step 9: - After clicking the “New icon”, from the menu, click on the  **Data module** icon for uploading the dataset.

Step 10: - After clicking the “Data module” icon, click on the  icon. Find your dataset, then select the dataset and click on the **Open** icon.

- After clicking “Open”, it will take some time, and then the dataset will be uploaded.

Step 11: - After the dataset is uploaded, click the “arrow” next to the “Save icon”

 (just below the Open menu). Then click  Save as... “Save As” icon, choose **My content** “My Content” icon, rename it (for example – Netflix) and click **Save** “Save” icon. Once you click Save, the Data Module will be saved successfully.

Step 12: - After saving the data module, click the  (Open menu) icon in the top-left corner. From the menu, click **+ New** icon, then select  icon.”

Step 13: - After clicking **Report**, check if **Blank** (Blank) is already selected — if it is, click **Create** icon; if not, choose first **Blank**, then click **Create**.

Step 14: - After clicking **Create**, the **Templates** dialog box appears. From the list of templates, select **List** (List) icon, and then click **OK** icon to proceed.

Step 15: - On the left side, click **Select a source** + (Select a Source) → Choose Data Module (Netflix) in “my content” → Click **Open** “Open” icon.

Step 16: - After the data loads, you will see your dataset fields (e.g., show_id, title, country, listed_in, release_year, etc.) in the **Data Items** pane.

Step 17: - Build the List-Report structure:

- You will see a list of data items on the left side, Double-Click on the country, then add.

- You will see a list of data items on the left side, Double-click on the listed_in field (Genre, then add.

- You will see a list of data items on the left side, Double-click on the show_id (or title), then add.

- After adding the country, listed_in, and show_id, the display appears as shown same as above.

Step 18: - After adding columns, click the country column, and in the toolbar, click the  icon to apply the group to the country column.

- After applying the group, the display looks like this.

- Step 19:** - After adding columns, click the listed_in column, and click the  icon to apply the group to the listed_in column.
- After applying the group, the display looks like this.

- Step 20:** - Click any value in show_id's, click the  icon, and click Count. Apply the count summary to the show_id column.

- After applying the summary, the display looks like this.

Step 21: - After applying the summary, now change the “count(show_id)” to “Number of titles”.

- For remaining the count(show_id) to Number of titles.
- Select the “count(show_id)”.

Step 22: - After that, click Source type. After clicking the show arrow  icon, then click  Text text.

- After clicking the text, the display looks like this.

Step 23: - Click on the text. After clicking, show  three dots. Click on  three Dots. After clicking, type “Number of titles”. Click OK. Then rename.

Step 24: - After that, click the  icon.

Step 25: - Choose yellow, then change the background Colour is yellow. After choosing yellow the display.

Step 26: - To save the report, click the small arrow ▼ next to the Save icon (beside Edit). Select  Save As... "Save as".

Save

- After running, show the report is “Number of titles” with country-wise.

PROJECT

Problem Statement - 02: - Create a tabular summary showing the number of titles released per year using the “release_year” column.

Solution:

Step 1: - After creating the data module, click on  (open menu) and select New.

Step 2: - Select Report.

GROUP NUMBER: 1

Step 3: - Select the style you want for your Report (by default, it is set as Blank) and click on Create option at top right corner.

Step 4: - Select List from widget type for your Report (You can select any widget type you want) and click OK.

Step 5: - Click on Select a source (left side) to add data module. Click on My content option and select the data module (E.g. Project) then click Open.

Step 6: - After selecting the data module, it will appear on the left side. Click on the icon > to expand the data in the dataset.

Step 7: - Double-click on the title you want to add to your Report.

Step 8: - Select the “release_year”.

Step 9: - Click on the icon  to group the same years from different rows into a single row.

Step 10: - Click on the icon  to sort the data (Ascending or Descending) to see trends by year.

Step 11: - For now, Select Ascending.

Step 12: - Now select the title

Step 13: - Click on the icon  (Summarize).

Step 14: - Select Count to count the numbers of titles release per year.

Step 15: - After that your report will look like this

Step 16: - Click on the save icon  (under the IBM Cognos Analytics) to save the report.

Step 17: - Give a name to your report and save it in My content.

Step 18: - Now click on the run icon (under the name of your report) to run the report.

Step 19: - It's done. Now you can see the number of titles release per year and how the quantity of Netflix content has changed over time

PROJECT

Problem Statement - 03: - Show the number of Netflix titles released each year.

Solution:

Step 1: - Click on the three lines  (Open menu) icon at the top left corner in IBM Cognos homepage.

Step 2: - After clicking  **Report**, check if **Blank** (Blank) is already selected — if it is, click **Create** icon; if not, choose first **Blank**, then click **Create**.

GROUP NUMBER: 1

Step 3: - After clicking **Create**, the **Templates** dialog box appears. From the list of templates, select **List** (List) icon, and then click **OK** icon to proceed.

Step 4: - On the left side, click **Select a source** (Select a Source) → Choose Data Module (Netflix) in “my content” → Click **Open** “Open” icon.

Step 5: - After the data loads, you will see your dataset fields after clicking on the arrow
➤ to expand the category (e.g. release_year, show_id) in the **Data Items** pane.

Step 6: - Build the List-Report structure:

- You will see a list of data items on the left side. Double-click on the **# release_year** , then add.

- You will see a list of data items on the left side. Double-click on the **abc show_id** , then add.

- After adding the country, release_year, and show_id, the display appears as shown same as above.

Step 7: - After adding columns, click the “release_year” column, and in the toolbar, click the  icon to apply the group to the country column.

- After applying the group, the display looks like this.

Step 8: - Click any value in show_id's, click the Σ icon, and click Count. Apply the count summary to the show_id column.

○ After applying the summary, the display looks like this.

Step 9: - After applying the summary, now change the “show_id” to “Number of titles”.

- For remaining the (show_id) to the “Number of titles”.
- Select the “show_id”.

Step 10: - After that, click on 'Source type'. After clicking the show arrow  icon, then click  Text text.

Step 11: - Click on the text. After clicking, show  three dots. Click on  three Dots. After clicking, type “Number of titles”. Click OK. Then rename.

○ Display is show like this.

Step 12: - After that, now change the “count(show_id)” to “Netflix Titles Released Per Year”.

- For remaining the “count(show_id)” to the “Number of titles”.
- Select the “count(show_id)”.

Step 13: - After that, click on 'Source type'. After clicking the show arrow  icon, then click  Text text.

Step 14: - Click on the text. After clicking, show  three dots. Click on  three Dots. After clicking, type “Netflix Titles Released Per Year”. Click OK. Then rename.

○ Display is show like this.

Step 15: To save the report, click the small arrow ▼ next to the Save icon (beside Edit).
Select  Save As... “Save as”.

Step 16: - After clicking on the Save As, they open a Save As box, and now choose My content. Enter the name of the report (“Question-03”), then click **Save** icon.

Step 17: - After saving, to run the report, click the Run  icon, which is just below the report name.

- After running, show the report is “Number of titles and Netflix Titles Released Per Year” with country-wise.

release_year	show_id
1925	Number of Titles
1925 - Count	Netflix Titles Released Per Year
1945	Number of Titles
1945 - Count	Netflix Titles Released Per Year
1954	Number of Titles
1954 - Count	Netflix Titles Released Per Year
1956	Number of Titles
1956 - Count	Netflix Titles Released Per Year
1958	Number of Titles
1958 - Count	Netflix Titles Released Per Year
1959	Number of Titles
1959 - Count	Netflix Titles Released Per Year
1961	Number of Titles
1961 - Count	Netflix Titles Released Per Year
1963	Number of Titles
1963 - Count	Netflix Titles Released Per Year
1964	Number of Titles
1964 - Count	Netflix Titles Released Per Year
1970	Number of Titles
Overall - Count	<Count(show_id)>

- Click Bottom, then show the overall - count “Netflix Titles Released Per Year”.

The screenshot shows the IBM Cognos Analytics web interface. The browser address bar displays the URL: `us1.ca.analytics.ibm.com/bi/perspective=authoring&closeWindowOnLastView=true`. The page header includes the IBM Cognos Analytics logo and a "New report" button. A blue banner at the top contains a maintenance message: "Maintenance: The upgrade is now complete. Click on More Info to see what actions may be necessary and to subscribe to future events". Below the banner is a toolbar with icons for various report actions. The main content area displays a table with the following structure:

2021 - Count	Netflix Titles Released Per Year
Overall - Count	5000

At the bottom of the interface, there are navigation controls: "Top", "Page up", "Page down", and "Bottom".

PROJECT

Problem Statement - 04: - Count how many times each genre (from “listed_in”) appears in the dataset.

Solution:

Step 1: Click on the three dots in the left corner of your report to select the entire report.

Step 2: Double-click on the listed_in option from the dataset to add a column to the report.

Step 3: Click on Listed_in.

Step 4: Click on the Summarize option.

Step 5: Select Count to count the genre.

Step 6 : Click on Group-to-group same genre from different rows into a single row.

The screenshot shows the IBM Cognos Analytics interface. On the left, the 'Insertable objects' pane lists various data items from a 'netflix_titles.csv' source, including 'show_id', 'type', 'title', 'director', 'cast', 'country', 'date_added', 'release_year', 'rating', 'duration', 'listed_in', and 'description'. The main workspace displays a report design with a table. The table has columns: 'show_id', 'title', 'release_year', and 'listed_in'. The rows are grouped by 'release_year' and 'title'. A context menu is open over the 'listed_in' column, showing options: 'Group / Ungroup', 'Group or ungroup selected data in a list', and 'Count(listed_in)'. The right-hand 'Properties' pane is visible, showing various styling options like 'CONDITIONAL', 'TEXT SOURCE', 'BOX', 'COLOR & BACKGROUND', and 'FONT & TEXT'.

Step 7: Click on the Sort option.

This screenshot shows the same IBM Cognos Analytics interface as the previous one, but with a different context menu open. The 'Sort' menu is displayed over the 'release_year' column, with the option 'Sort selected data.' highlighted. The table structure remains the same, with columns for 'show_id', 'title', 'release_year', and 'listed_in', and rows grouped by 'release_year' and 'title'. The 'Insertable objects' pane and the 'Properties' pane are also visible in their respective positions.

Step 8 : Select Descending. It will show the most common genres at the top.

The screenshot shows the IBM Cognos Analytics interface. On the left, the 'Insertable objects' pane lists fields from the 'netflix_titles.csv' dataset, including show_id, title, type, director, cast, country, date_added, release_year, rating, duration, listed_in, and description. The main report area displays a table with columns: show_id, title, type, release_year, and listed_in. A context menu is open over the 'listed_in' column, showing 'Sort in Layout' options: 'Ascending' (selected), 'Descending', and 'Don't sort'. The 'Descending' option is highlighted. The right-hand 'Properties' pane shows various styling options like Conditional styles, Text source variable, Data item label, Data format, Drill-through definitions, Box, Border, Padding, Box type, Color & Background, and Font & Text.

Step 9 : Click on the save icon  (under the IBM Cognos Analytics) to save the report.

This screenshot is similar to the previous one but shows the report after saving. The 'Save' icon in the top toolbar is now highlighted. The report table content remains the same, but the 'Sort in Layout' menu is no longer open. The 'Properties' pane on the right is also visible, showing the same styling options as before.

Step 10 : Now, click on the run icon ▶ (under the name of your report) to run the report.

Step 11: It's done. Now you can see how many times each genre appears to identify the most common genre or category.

PROJECT

Problem Statement - 05: - List each rating category (like TV-MA, PG-13, etc.) with total number of titles under each.

Solution:

Step 1: - Then click on the **menu** and then click on **new**. Now, click **Data Module** and Upload “netflix_titles.csv” dataset.

Step 2: After uploading the dataset ‘netflix_titles.csv’, save it as “netflix_dm”.
So the **data module** was created.

Step 3:- Now go Home page and click on **New** And Create a **Blank List Report** and add the “**netflix_dm**” data module from **my content**.

Step 4: Now Add ‘rating’ and ‘titles’ column from ‘netflix_dm’ data module.

Step 5: After adding 'rating' and 'title' columns. Now right right-click on 'rating' column and on the top bar, click on the **Group/Ungroup** button. It makes a group of all rating data.

Step 6: And then right-click on the 'title' column and click the properties icon below the profile picture, then go to the 'DATA ITEM' section and set name = 'total titles' and detail aggregation = 'count'

Step 7: Now click on '<total title>' into the "total title" column and then click on the sort icon and then sort it in descending order. We will get the greatest number of titles first.

Step 8: After Applying All the filters, save it by clicking the save button or 'ctrl + s' with the name of "count of titles report" in My content.

Step 9:- After applying all the filters and saving it as '**count of titles report**' name, now click run as HTML, and a new tab will open and show all ratings with the most titles first.

The screenshot shows the IBM Cognos Analytics web interface. The browser address bar displays 'us1.ca.analytics.ibm.com/bi/?perspective=authoring&closeWindowOnLastView=true'. The interface includes a top navigation bar with 'IBM Cognos Analytics' and a 'New report' dropdown. Below the navigation bar is a toolbar with icons for various actions, including a 'Filters' icon. The main content area displays a table with two columns: 'rating' and 'title'. The table lists TV ratings and their corresponding title counts, sorted in descending order of title count.

rating	title
TV-MA	2050
TV-14	1268
TV-PG	432
R	352
TV-Y	219
PG-13	216
TV-Y7	192
TV-G	138
PG	121
G	12

- And In Final Output you will get **number of titles** for Each **rating** category.

PROJECT

Problem Statement - 06: Find Movies vs TV shows, which category has the most titles.

Solution:

Step 1 : On menu, click new, then Report, and Create a Blank List report.

Step 2:- Now, click Select source to add 'netflix_dm' data module. Which was created by the "netflix_titles.csv" dataset.

Step 3 : Now, first click 'type' and 'title' columns from the netflix_dm data module, and it will automatically add to the report screen.

Step 4 :- Now, click on the 'title' column and then click top right side of the property's icon.

Step 5 : Now click on 'DATA ITEM' and then set name = Total title and detail aggregation = none to count, summary aggregation = none to count.

Step 6: Now, click on the type of column and then click Apply Group Filter by clicking the group icon from the top bar.

Step 7 : Now, click on the Save As button and save it in My content and set the name =
“Movies vs TV shows Title Count”

Step 8 : After saving the report, click on run and run it as HTML, and you will get
Your final output.

The screenshot shows the final output of the report as an HTML table. The table has two columns: 'type' and 'title'. The data is as follows:

type	title
TV Show	1789
Movie	3211

- This is the Final Output where **'Tv Shows'** has **'1789'** titles and Movies has **'Movies'** has **'3211'** titles .

PROJECT

Problem Statement - 07: Using Exploration in IBM Cognos Analytics, create a List a visualization that shows the total number of Netflix titles “(show_id)” released each year “(release_year)”.

Solution:

Step 1: - Click on the three lines  (Open menu) icon at the top left corner in IBM Cognos homepage.

Step 2: - After the “Open menu” opens, click  icon.

GROUP NUMBER: 1

Step 3: - After clicking the “New icon”, from the menu, click the  **Exploration** icon for visualization.

Step 4: - After clicking the exploration icon, open an “add a data source to explore” and click on my content. Then choose your data-module, then click **Add** to upload your data-module.

- After clicking add display looks like this.

Step 5: - Click **Create +** icon to choose a template.

Step 6: - After that, click “Single visualization”. Looks like this.

Step 7: - Click **Choose a type** icon, then open the types of visualizations.

Step 8: - Click  icon, then open a line-chart. After clicking the line chart, the display looks like this.

Step 9: - From the left side, drag  release_year “release_year” on the x-axis.

Step 10: - From the left side, drag ^{abc} show_id “show_id” on the y-axis.

○ After adding the x-axis and the y-axis, the display looks like this.

Step 11: - For applying summarizing on **show_id (Count distinct)**, Mouse right click then open multiple summarize options.

Step 12: - Click on the summarize, then click **Count** count. After that, the display looks like this.

Step 13: - To save the report, click the small arrow ▼ next to the Save icon (beside Edit). Select  Save As... “Save as”.

Step 14: - After clicking on the Save As, they open a Save As box, and now choose My content. Enter the name of the report (“Question-07”), then click  Save icon.

-  This shows how Netflix added more content over the years.

PROJECT

Problem Statement - 8: - Analyse the relationship between the release year and the description length of Netflix titles using a Scatter Chart.

Solution:

Step 1: - Click on the three lines  (Open menu) icon at the top left corner in IBM Cognos homepage.

Step 2: - After the “Open menu” opens, click  icon.

Step 3: - After clicking the “New icon”, from the menu, click the  **Exploration** icon for visualization.

Step 4: - After clicking the exploration icon, open an “add a data source to explore” and click on my content. Then choose your data-module, then click **Add** to upload your data-module.

- After clicking add display looks like this.

Step 5: - Click **Create +** icon to choose a template.

Step 6: - After that, click “Single visualization”. Looks like this.

Step 7: - Click **Choose a type** icon, then open the types of visualizations.

Step 8: - Scroll the screen, then click  icon, then open a line-chart. After clicking the scatter chart, the display looks like this.

Step 9: - From the left side, drag  release_year “release_year” on the x-axis.

Step 10: - From the left side, drag **description** “description” on the y-axis.

○ After adding the x-axis and the y-axis, the display looks like this.

Step 11: - For applying summarizing on **description** , Mouse right click then open multiples summarize options.

Step 12: - Click on the summarize, then click **Count** count. After that, the display looks like this.

Step 13: - To save the report, click the small arrow  next to the Save icon (beside Edit). Select  Save As... “Save as”.

Step 14: - After clicking on the Save As, they open a Save As box, and now choose My content. Enter the name of the report (“Question-07”), then click  Save icon.

- 🇮🇹 After that show the points will move upward year by year → meaning Netflix added **more content** each year.

PROJECT

Problem Statement - 09: - Generate a list report using a Table Report showing each country and the total number of titles produced.

Solution:

Step 1: - After creating the data module, click on  (open menu) and select New.

Step 2: - Select Report.

GROUP NUMBER: 1

Step 3: - After clicking **Report**, check if **Blank** (Blank) is already selected — if it is, click **Create** icon; if not, choose first **Blank**, then click **Create**.

Step 4: - After clicking **Create**, the **Templates** dialog box appears. From the list of templates, select the **Table** (List) icon, and then click the table to open an “insert table box”. Fill number of columns is 2, and the number of rows is 1, then click on the **OK** icon to proceed.

Step 5: - On the left side, click **Select a source** + (Select a Source) → Choose Data Module (Netflix) in “my content” → Click **Open** “Open” icon.

Step 6: - After the data loads, you will see your data module. Click on the > for expand your data item. After that, you look (e.g., show_id, title, country, listed_in, release_year, etc.) in the **Data Items** pane.

Step 7: - Now, click on the  “+” insert icon on column 1. Click on the list.

Step 8: - After that, click on the  icon, then generate the List report.

- After generating list report display look like this.

Step 9: - Now double-click on the `country` "country". Then add the country column in the List report.

Step 10: - Now, double-click on the **show_id** “show_id”. Then add the country column in the List report.

Step 11: - Click any value in “show_id`s”, click on the Σ icon, and click on the **# Count** Count. Apply the count summary to the “show_id” column.

- After applying the summary, the display looks like this.

Step 12: To save the report, click the small arrow  next to the Save icon (beside Edit). Select  Save As... "Save as".

Step 13: - After clicking on the Save As, they open a Save As box, and now choose My content. Enter the name of the report ("Question-9"), then click **Save** icon.

Step 14: - After saving, to run the report, click the Run icon, which is just below the report name.

- After running, show the report like this.

The screenshot shows the IBM Cognos Analytics interface. The report displays a table with two columns: 'country' and 'show_id'. The 'country' column is currently empty, and the 'show_id' column contains a list of 20 IDs. The interface includes a top navigation bar with 'My IBM', 'Question 9', and 'New report' tabs. The URL bar shows 'us1.ca.analytics.ibm.com/bi/?perspective=authoring&closeWindowOnLastView=true'. The bottom of the report has navigation controls: 'Top', 'Page up', 'Page down', and 'Bottom'.
